

FROM THE BENCH

Lean and Green

DARRELL WARREN
VICE PRESIDENT, TOOLS DIVISION

Being a socially-responsible company is an ongoing effort for us and our worldwide affiliated companies. We have always been and continue to be committed to conducting all phases of operations in the most ethically, environmentally and socially-responsible manner possible.

We purchase our gold from companies that share our commitment. Only specific branded gold bars or grain are acceptable in our production operations. Raw materials used in production are recycled internally. Purchased products are sourced from companies who also have policies upholding high environmental standards.

We continue to incorporate a "Refined Karats" logo to assist you in identifying which product lines are manufactured by Stuller using recycled and refined metals. In our new Metals Book, Vol. 76, you will find that we have one of the largest mill product offerings in the industry that keeps our environment in mind.

In this issue, we have included our new line of recyclable mini-grip bags (see page 6). Using and selling recyclables underscores our commitment to being earth friendly, while lowering the impact of materials placed into landfills.

We are proud to say that we've always been and continue to be true to our environment, to our practice and to you, our customer.

STULLER

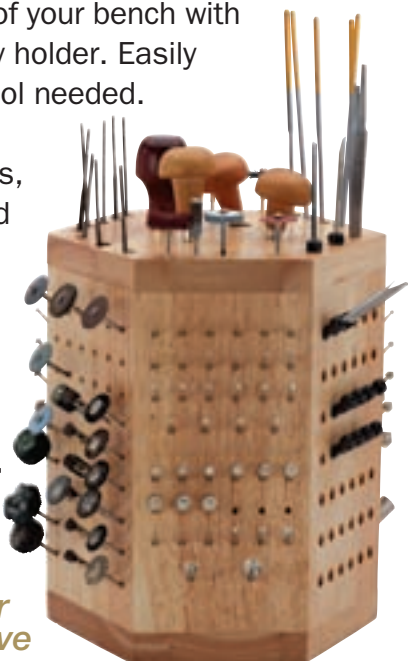

Rotating Bur/Tool Holder

Clean up the top of your bench with this bur accessory holder. Easily reach any hand tool needed. This container holds gravers, files, burs, punches and abrasive wheels.

INNOVATION

Introducing the Stuller Select Collection...

The Stuller Select Collection provides the best value and highest quality leather watchstraps available. Matching threading gives the perceived value of hand stitching. Look for the Select label that distinguishes this fine quality strap.

Each strap is precision finished to fit watches exactly and comes with one yellow and one white nickel-free highly-polished buckles and new spring bars.

Keepers and lug ends are reinforced for strength and durability. Water-resistant vegetable tanned calfskin lining adds comfort to the full strap. This premium grade lining is free of dye and chemical tanning agents, and it resists perspiration for gentle wearability on the wrist.

See the full collection at stuller.com.

Purchase one or the whole collection. All with our same-day shipping.

GREEN BUSINESS

MiniGrip Recyclable Bags

MiniGrip's newest product line, GreenLine™ contains an innovative, bio-resin additive found to be biodegradable (ASTM D5511) in spite of harsh landfill conditions, thus drastically reducing the plastic's landfill life. Bags break down only when exposed to micro-organisms in a landfill, giving it a longer shelf life.

RedLine™ bags feature a premium zipper you can snap open quickly and easily with just one hand. Bags are marked with the universal recycling symbol, so your customers will know you are environmentally conscious. Redlines are 100% recyclable.

Available in packs of 100 or boxes of 1,000. For a complete listing of sizes, visit stuller.com.

DIAMOND REPAIR

CONTEMPORARY METALS

Tungsten

The Forever Polished Ring

Tungsten rings are the most wear-resistant rings available. Tungsten is 10 times harder than 18k gold and four times harder than titanium. Because of their utmost hardness, Tungsten rings will retain their form and gleam longer than any other material on earth.

Discover the incredible appearance and toughness of tungsten rings and wedding bands. In a remarkable operation, Tungsten powder is formed at 2400 °F to produce rings that are literally scratch proof and indestructible. Then, they are polished with a diamond compound, resulting in a shine that will virtually last forever. Tungsten is the everlasting combination of amazing strength with style and comfort. It is an uncommon metal, nearly as hard as diamond, that can stay "forever polished." The finish can last 50 years!

Powder metal manufacturing:
 To manufacture Tungsten rings, Tungsten, Carbon and other elements are specially ground into a fine powder. This composite powder is compressed into ring dies using high pressure to form the ring blank. The blank is then fired in an oxygen-free, high-temperature furnace to sinter the powder, forming an extraordinarily dense, hard ring.

Tungsten is a difficult material to machine; cutting and shaping the ring blank is similar to, in many ways, the cutting and polishing of a rough diamond.

In the final finishing steps, diamond polishing wheels and diamond paste create a permanent beautiful luster on the Tungsten ring, resulting in the most wear-resistant rings available on the market today.

CUSTOMIZATION

Laser Wire Tips

Using the correct laser wire in conjunction with your laser welder is extremely important. Many laser wire users have had laser wire that sparks or splatters under the intense heat of the laser beam. Using the correct laser wire will help avoid pits and cracks in the weld area. The following is a brief review of some of the most popular laser wire alloys.

14/18K Palladium White Wire- This is the first formula to come out that was better suited for laser welding. The addition of palladium instead of nickel stops the splatter and causes the metal to flow more smoothly. Hitting the end of the wire causes it to make a ball that can be used for prongs. This wire also reduces the small cracks that can form in white gold after it has been laser welded. Our newest formula of the palladium white wire is even better and easier to use than before.

14KY Zinc-Free- Zinc is used in most gold alloys to stop the metal from oxidizing and turning pink when it is melted. Zinc has a very low melting point and vaporizes causing the splatters and porosity that should be avoided. This new alloy removed the zinc and is much more laser-friendly while keeping its gold color.

AG/PD Wire- Laser welding silver is one of the most difficult things to do. The high voltage required causes the piece to heat up and any reflection off the ring hitting your hands can burn. Until recently, welding with a silver solder was the best way. This silver/palladium wire melts at a lower voltage than sterling silver and doesn't splatter like the silver solders. This is a wire made up of around 50% silver and some palladium. It is not a perfect color-match to sterling.

Stuller is your prime manufacturer of the widest selection of laser wire in the industry. We continue to develop new alloys and solutions. Call our Technical Team at Ext 4300 for expert advice and a complete list of laser wire available.

Speedwire Laser Welding Wire Dispenser

Ever dreamed of the day when you'd feed laser wire into a weld with ease? Today, with the Speedwire dispenser system, you can do it.

The Speedwire system features a specially-designed dispenser with a finger-controlled feed. Use this one-handed operation to get in as close as 2mm from the weld. How's that for improving your accuracy?

Each reloadable dispenser is able to hold a ten-foot wire spool in its clear, sealed compartment. Monitor how much you've used while keeping it neat and clean. The wire feeds through a stainless-steel guide for stability. No need to keep repositioning the wire to get it in just the right spot. The dispensers are color-coded so you can tell one metal from another. This is definitely a tool you won't want to live without.

To see our full selection of laser wire visit stuller.com.
 Wire and dispenser sold separately.

CUSTOMER CORNER

Bench Rock Stars at the Instore Show

The Champions were out, and the pressure was on for some awesome trophies and the title of Bench Rock Star.

Two jewelers head to head... given the same raw materials, the same tools and a limited amount of time to wow the judges.

The goal?

Demonstrate to the jewelry industry what a great jeweler can accomplish given the proper training and good tools.

The results?

Amazing! Yes, these guys are talented, but it also takes a lot of confidence and nerve to work at an unfamiliar bench, with tools that belong to someone else and with cameras and people watching your every move.

Featured categories were 1) stone setting, 2) hand engraving, 3) CAD design and 4) wax carving. Whether you're a bench jeweler, jewelry designer, store owner or wholesaler, make it a point to check out next year's bench pressure challenge at the Instore Show. You'll see the best that this industry has to offer, not only in equipment, tools and technology, but also in bench skills and ingenuity.

Tools sponsored by Stuller as our ongoing commitment to bench education in the industry.

To see the results of the bench pressure challenge, visit www.stullerbench.com in August.

CUSTOMER CORNER

Customer Creation

Graduate Jeweler Tim Dwornick of Ohlsen's Jewelry Design Studio Inc. in Hastings, Nebraska sent us a photo of a pendant created from the "leftovers" from a remount project in their store.

Tim's customers brought in an 18K heavyweight vintage brooch and asked Tim to tear it down to create a couple of rings for their daughters, using 4 of the 17 original European-cut diamonds.

After further discussion, the pendant shown left was designed to use the other 13 diamonds. All materials for the pendant came from Stuller: 4.0H-14KY tube and 2.25H - 14KY tube. A #19 fancy bail-14ky was altered to accommodate a jump ring and was set with 3mm diamonds.

The customer's chains easily fit through the opening, and the tubes were

set at varying heights to give depth and randomness to the design.

Even the tools and supplies to create this design came from Stuller... from the Wolf Wax Table used to hold the flex shaft vertically while the diamonds were set, the hart and setting burs, burnishing tool, to the PlastiCast investment used to hold the design perfectly in place as torch soldering was performed, and to the Fabulustre giving the piece its mirror finish.

Tim's customers were absolutely delighted with the end result.

He told us, "Her eyes told me that this piece would be enjoyed for years to come, and his eyes told me that he was very happy that I had made her day."

You can see more of Tim's work at www.warpedmetal.com.
